# BINYAPP

## ENTERPRISE

### Digital Construction Management Vertical

From estimate calculation to mobile act —  
in a unified secure perimeter of your company.

**360° Control**  
Real-time

PROBLEM

# "Dead Zone" of Control

Office information (IC) and reality on construction site exist in parallel worlds.

## Construction Project Dashboard Template

Office (IC) lives its own life, construction site — its own. Data doesn't match.

Control appears only at the Act stage, when money is already spent.

Management decisions are made 'post-factum', material overrun has already happened.

# Methodology: From 'Theory' to 'Fact'

System created by builders for builders

- 1 Analysis of real processes on site
- 2 Immersion in PTO and production
- 3 Problem breakdown in practice
- 4 Digital process formation based on facts
- 5 Pilot projects and refinement

**Real Fact**  
From site to office

# Architectural Solution — Unified Contour

## KenML integration

Hard limits through KenML integration.

## Hard limits

The system blocks any request if it exceeds the remaining estimate. Absolute control of the project budget.

# Field Independence Technologies

Designed for real construction conditions

## Offline-first

Full functionality without internet,  
**auto-sync when online.**

## Kalkan e-signature

Built-in digital signature, **signing in  
10 seconds.**

## AI-generated Gantt

**Auto-schedule generation** from  
estimate.

YOUR INTELLECTUAL PROPERTY

# Digital Sovereignty: On-Premise + source code

Full control over system and data. The solution is installed in your security contour.

On-Premise installation on your servers

Source code remains with client

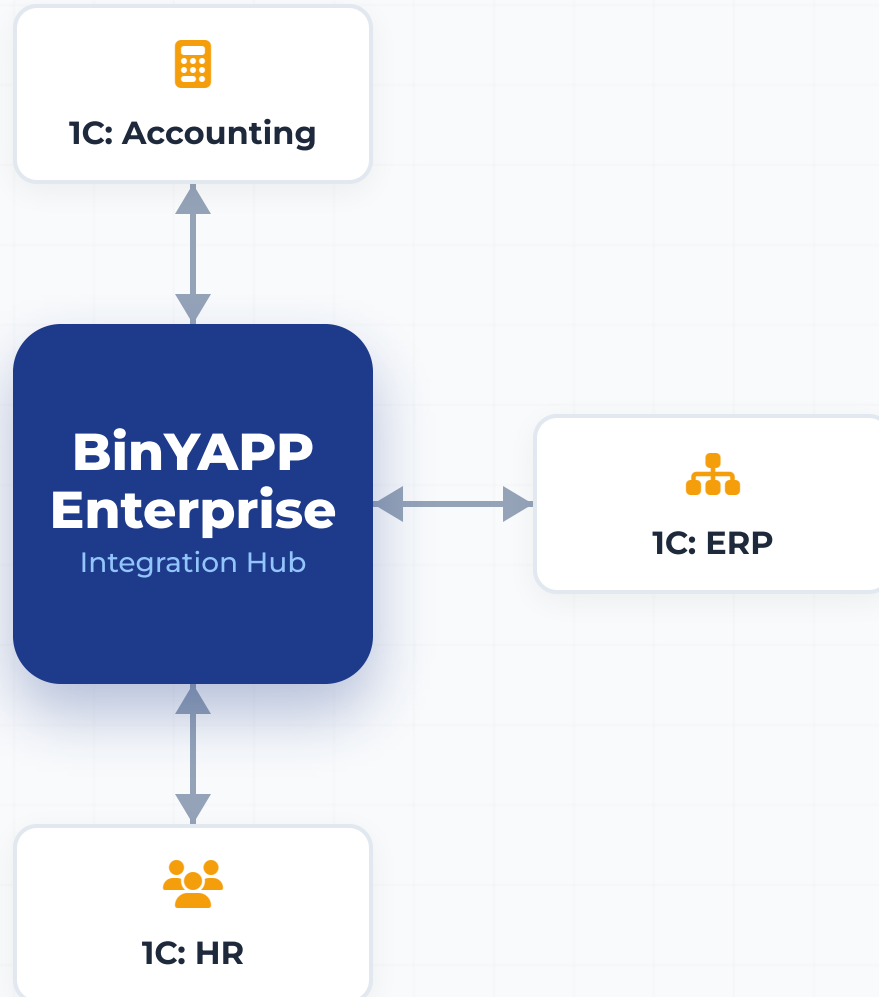

No external clouds or third parties

Full control over data and processes

# Integration: System Brain — 1C

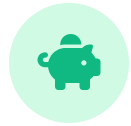

BinYAPP doesn't replace 1C — it makes it current

-  Auto-transfer M-29 and KS-2
-  Directory exchange

# Economic Effect (ROI)

---

**7-10%** savings

Construction budget savings through theft prevention.

**~50%** reduction

Labor cost reduction.

**Weeks** →  
**Hours**

Approval time reduction.

# Launch Roadmap (3 months)

Fast start and transparent implementation

- 1 Month 1: Architecture + IC integration**  
Deployment on client servers, integration with existing IC
- 2 Month 2: Customization + Kalkan**  
Interface customization, e-signature setup
- 3 Month 3: Staff training + Pilot launch**  
User training, pilot project, final handover

**100% Ready**  
In 3 months

# Get in Touch
